

KOMTRAX™ and VHMS for lower total costs.

Bauma, April 2010 – KOMTRAX™ and VHMS are exclusive monitoring systems by Komatsu that enhance productivity and lower costs.

KOMTRAX™ is available as standard on most Komatsu models. With unique features, such as the “one click” that exports the data of a complete fleet of machines to a popular spreadsheet application format, the worldwide success of Komatsu’s extensive monitoring system is undeniable. KOMTRAX™ is currently activated on more than 19.000 Komatsu machines in Europe alone.

KOMTRAX™ will be a star attraction on the Komatsu stand this year at bauma. Regarded by many as the most advanced and practical machine monitoring system on the market today, KOMTRAX™ provides a wealth of machine information in a recently updated interface made even more user friendly by the experts at Komatsu.

KOMTRAX™ facilitates peak machine performance and can represent a major cost advantage. It optimizes fleet management, allows pro active and preventive maintenance and assists efficiently in running a business. The resale value of equipment is enhanced, as owners gain easy access to the accurate history of a machine’s life.

Komatsu’s Vehicle Health Monitoring System (VHMS) is standard on Komatsu large size & mining machines and is another essential tool for keeping track of the state of your machine and to help minimize your costs. Detailed technical and operational data is collected by an onboard VHMS controller and can be easily viewed by customers, distributors and Komatsu service personnel.

Information in the news releases is current on the date of the announcement and is subject to change without notice
