

The NEW WA150PZ Dash-6 enters the family of great all-rounders

Bauma, April 2010 – The new WA150PZ-6 9-tonne Komatsu wheel loader provides outstanding versatility thanks to its unique 'PZ' kinematics. Large break-out forces for easy bucket filling, parallelism for fast pallet moving and outstanding tilting forces for controlled work with large attachments make this machine ideal for any kind of application. Earth moving, palette loading, waste handling, log handling - no job is too tough.

The new WA150PZ Dash-6 sets new standards for productivity, fuel efficiency and driver comfort. With its highly efficient Komatsu Tier-3 Engine and an advanced electronically controlled hydrostatic transmission (HST), the cost per tonne is reduced once again. The renowned SpaceCab has been enlarged and provides superior operator comfort with its climate control and heated air suspension seat.

The easy-to-use hydrostatic drive system ensures perfect driving performance in any situation. Its outstanding responsiveness and quick forward-reverse changes speed up the loading cycles for greater productivity. Highly controllable, with self-braking and adjustable speed limitation, it ensures safe and precise operations even in confined areas. The adjustable traction control system ensures traction at all times. Tire slip is eliminated which further increases productivity and reduces tire wear.

Maintenance has never been easier. The machine features a wide-core radiator with automatic reversible fan for speed cleaning and to further reduce downtime. In option, the WA150PZ-6 offers an automatic lubrication system to make maintenance even easier. KOMTRAX, Komatsu's exclusive satellite machine management system provides essential data for advanced fleet management and maintenance planning.
