

Komatsu at BAUMA 2010 - KOMTRAX™ and low cost of ownership.

Munich, January 2010 – At Bauma 2010, Komatsu will present a large selection of its newest machines and latest technological innovations along with an integrated package of aftermarket services and options all designed to offer a lower Total Cost of Ownership (TCO) to Komatsu customers.

KOMTRAX™, Komatsu's exclusive satellite monitoring system, is a key factor in this offer, and it will once again be a star attraction on the Komatsu stand this year at Bauma. Regarded by many as the most advanced and practical machine monitoring system on the market today, KOMTRAX™ provides a wealth of machine information in a recently updated interface made even more user friendly by the experts at Komatsu.

KOMTRAX™ facilitates peak machine performance and often represents a major cost advantage. It optimizes fleet management, allows pro active and preventive maintenance and assists efficiently in running a business. The resale value of equipment is enhanced, as owners gain easy access to the accurate history of a machine's life.

KOMTRAX™ is available as standard on most Komatsu models. With unique features, such as the "one click" that exports the data of a complete fleet of machines to a popular spreadsheet application format, the worldwide success of Komatsu's extensive monitoring system is undeniable. KOMTRAX™ is currently activated on more than 18.000 Komatsu machines in Europe alone.

KOMTRAX™ : for higher productivity and lower costs.
