

New “Super Silenced” JTHB150BOX Breaker

Bauma, April 2010 - Along with the latest machines and options, Komatsu introduces a new JTHB150BOX “Super Silenced” Breaker.

The JTHB150BOX is the flagship of the construction size Komatsu breakers. Pre-fitted for Auto Greasing system, with a 15% weight reduction and an increased performance/weight ratio, the new breaker is both more operator and machine friendly. New and highly durable shock absorbers and silencer plates make it easier to use, and lessen vibrations and operator fatigue. Vibrations and noise are further diminished thanks to a gas cushion that absorbs piston recoil and recovers the energy for the next impact.

These unique benefits are due to an innovative blend of a simple yet efficient design philosophy and an “accumulator-free” technology. Komatsu breakers are not sensitive to higher back pressures and easily fit on all makes and on older excavators.

Information in the news releases is current on the date of the announcement and is subject to change without notice.
